

## Appendix: Survey of users taking MSDs

Microsoft Research Online Health Search Study (Private and anonymous)

We are doing a study of peoples' experiences with fluctuating moods. This survey is designed to measure the kinds of information on the Web sought by people who have been prescribed mood stabilizing drugs.

The survey is designed to take around 5-10 minutes to complete. It is completely anonymous.

This survey is conducted by Microsoft Research, and will only be used for academic research purposes.

Please answer this survey if you have been prescribed a medication for bipolar disorder or other mood swings, including the following drugs: Eskalith, Lithiobid, Lithonate, Lithotabs, Valproic acid, Divalproex, Valproate, Depakote, or Depakene.

Question: Have you have been prescribed one of the following drugs: Eskalith, Lithiobid, Lithonate, Lithotabs, Valproic acid, Divalproex, Valproate, Depakote, or Depakene?

Answers: Yes \ No

Only users who answered "Yes" to this questions saw the following questions:

1. Question: My physician has prescribed me to take a regular dose (e.g. daily) of a mood stabilizing medication:

Answer (choose one of): Yes \ No
