Multimedia Appendix 2: Database inclusion criteria

The inclusion criteria for databases required that databases include journals publishing peer-reviewed research articles; this criterion excluded databases limited to graduate dissertations or theses, non-peer-reviewed periodicals, news, or non-print media (e.g., video or audio).

1) Permit searches of full text, abstract, or keywords.
2) Full text published in English.
3) Exhibit relevance to the subject (e.g., a database specific to programming languages in the computer science field was excluded).

Subsequent rounds used these twenty-eight databases to locate relevant research articles.
