Design

Describe target population, sample frame. Is the sample a convenience sample? (In "open" surveys this is most likely.)

See Methods section in main text for description of target population. We used an "open survey" design, in which all visitors were offered the opportunity to take the survey if they viewed one of the pages where the survey was programmed to appear. This resulted in a convenience sample of survey respondents.

IRB (Institutional Review Board) approval and informed consent process

Mention whether the study has been approved by an IRB.

This study was approved by the University of California San Francisco Committee on Human Research.

Describe the informed consent process. Where were the participants told the length of time of the survey, which data were stored and where and for how long, who the investigator was, and the purpose of the study?

In the invitation to take the survey (see below in “Contact Mode”), participants were told the length of time and the purpose of the study.

The purpose of the study was described more specifically at the end of the survey, when the investigators’ email was also provided.

Information was not shared regarding how long the data would be stored nor for how long.

If any personal information was collected or stored, describe what mechanisms were used to protect unauthorized access.

No personal information was collected beyond non-identifying demographics. Survey data were stored on a secure server at UCSF.

Development and pre-testing

See eAppendix5 below.
State how the survey was developed, including whether the usability and technical functionality of the electronic questionnaire had been tested before fielding the questionnaire.

**Recruitment process and description of the sample having access to the questionnaire**

Open survey versus closed survey? An “open survey” is a survey open for each visitor of a site, while a closed survey is only open to a sample which the investigator knows (password-protected survey).

**Contact mode:** Indicate whether or not the initial contact with the potential participants was made on the Internet. (Investigators may also send out questionnaires by mail and allow for Web-based data entry.)

Open survey

Only on the Internet. The invitation to take the survey appeared in a pop-up window, and the visitor then was directed to take the survey at the end of the session. The wording of the invitation was:

“We’d like your feedback.

Your participation in this 2-minute survey will help improve this nonprofit Web site, making it easier for everyone to find a good hospital or doctor.

The survey will appear at the end of your Web site visit.

Take Our Survey  No Thanks

All Web site visitors are being asked only once to participate in this research survey and participation is voluntary. All results are strictly confidential and anonymously collected. If you have any questions about the survey, please contact us at: XXX@xxxx.edu"
How/where was the survey announced or advertised? Some examples are offline media (newspapers), or online (mailing lists – If yes, which ones?) or banner ads (Where were these banner ads posted and what did they look like?). It is important to know the wording of the announcement as it will heavily influence who chooses to participate. Ideally the survey announcement should be published as an appendix.

No advertising was done for the survey.

Survey administration

State the type of e-survey (eg, one posted on a Web site, or one sent out through e-mail).

Web survey

Describe the Web site (for mailing list/newsgroup) in which the survey was posted. What is the Web site about, who is visiting it, what are visitors normally looking for? Discuss to what degree the content of the Web site could pre-select the sample or influence the results. For example, a survey about vaccination on an anti-immunization Web site will have different results from a Web survey conducted on a government Web site.

See the Background section of the main text of the paper for a description of the participating Chartered Value Exchange websites. See the Limitations section of the main text for a discussion of potential response bias.

Was it a mandatory survey to be filled in by every visitor who wanted to enter the Web site, or was it a voluntary survey? Voluntary

Were any incentives offered? No incentives were offered
In what timeframe were the data collected?

Data were collected February –August 2011

Randomization of items or questionnaires

To decrease cognitive burden, each consumer (patient or friend/family member) was asked only a randomly chosen subset of categories. Questions were always presented in the same order.

Used adaptive questioning (certain items, or only conditionally displayed based on responses to other items) to reduce number and complexity of the questions?

Different items were used for different groups of respondents (patients, friends or family members, healthcare professionals), with respondent type determined in the first page of questions. In addition, patients and friends or family members had a larger number of survey items that were relevant to them compared to the other respondent groups. In order to reduce the response burden for them, each patient or friend/family member was shown a random selection of three of five blocks of questions.

What was the number of questionnaire items per page? The number of items is an important factor for the completion rate.

Range 1-9. Most pages had 1-4 items.

Number of screens (pages). Over how many pages was the questionnaire distributed? The number of items is an important factor for the completion rate.

The number of screens ranged from 4-6, depending on the respondent type. At the top of each screen, progress through the survey was reported (“30% complete”, next screen “40% complete”).

Completeness check. It is technically possible to do consistency or completeness checks before the questionnaire is submitted. Was this done, and if “yes”, how (usually JAVAScript)? An alternative is to check for completeness after the questionnaire has been submitted (and highlight mandatory items). If this has been done, it should be reported. All items should

One question was required in order to advance through the rest of the survey (the initial respondent type item). No other questions were mandatory. All non-scaled items had a non-response or “other” option.
provide a non-response option such as “not applicable” or “rather not say”, and selection of one response option should be enforced.

Review step. State whether respondents were able to review and change their answers (eg, through a Back button or a Review step which displays a summary of the responses and asks the respondents if they are correct).

Respondents were able to change their responses using a “Back” button at the bottom of each screen.

Response rates

Definition of unique site visitor. If you provide view rates or participation rates, you need to define how you determined a unique visitor. There are different techniques available, based on IP addresses or cookies or both.

View rate (Ratio of unique survey visitors/unique site visitors). Requires counting unique visitors to the first page of the survey, divided by the number of unique site visitors (not page views!). It is not unusual to have view rates of less than 0.1 % if the survey is voluntary.

For the numerator of View Rate, we used the number of unique visitors shown the invitation because the first page of survey items was not viewed until a visitor agreed to take the survey. The survey view rate was relatively high, as the survey was designed to survey most website visitors.

Participation rate (Ratio of unique visitors who agreed to participate/unique first survey page visitors). Count the unique number of people who filled in the first survey page (or agreed to participate, for example by checking a checkbox), divided by visitors

As numerator, we counted the number of respondents who completed the first survey question. The denominator was the number of unique visitors shown the invitation (the numerator as described above in View Rate).
who visit the first page of the survey (or the informed consents page, if present). This can also be called “recruitment” rate.

Completion rate (Ratio of users who finished the survey/users who agreed to participate). The number of people submitting the last questionnaire page, divided by the number of people who agreed to participate (or submitted the first survey page). This is only relevant if there is a separate “informed consent” page or if the survey goes over several pages. This is a measure for attrition. Note that “completion” can involve leaving questionnaire items blank. This is not a measure for how completely questionnaires were filled in. (If you need a measure for this, use the word “completeness rate”.)

We did not calculate the completion rate. Because consumer respondents were randomized to be shown only a specific set of questions, it is difficult to determine whether a blank question is because a consumer was not shown the question or because they did not complete it. Therefore, it is difficult to know where the consumers stopped answering questions and where they stopped being shown questions. The coding of the answers in the survey software did not differentiate between these two types of blanks.

Preventing multiple entries from the same individual

Cookies used? Indicate whether cookies were used to assign a unique user identifier to each client computer. If so, mention the page on which the cookie was set and read, and how long the cookie was valid. Were duplicate entries avoided by preventing users access to the survey twice; or were duplicate database entries having the same user ID eliminated before analysis? In the latter case, which entries were kept for analysis (eg, the

Cookies were used. Once the survey invitation was deployed for an IP address, it did not deploy again. We did not prevent duplicate entries by tracking user access beyond the IP address.
The IP address of the client computer was used to identify potential duplicate entries from the same user. No two entries from the same IP were allowed for the duration of the study period, accomplished by not inviting users with the same IP address to take the survey more than once.

We did not analyze the log file to identify multiple entries. We used the log files to exclude answers that we had tagged as “test” answers using the free text options.

Not applicable, since we used an “open” survey design.

All surveys were analyzed.
questionnaires analyzed? Were questionnaires which terminated early (where, for example, users did not go through all questionnaire pages) also analyzed?

Questionnaires submitted with an atypical timestamp

Some investigators may measure the time people needed to fill in a questionnaire and exclude questionnaires that were submitted too soon.

Statistical correction

Indicate whether any methods such as weighting of items or propensity scores have been used to adjust for the non-representative sample; if so, please describe the methods.

We did not exclude surveys based on atypical timestamps.

No weighting scheme was used for the analysis of results.
eAppendix 2. Survey Development

We drafted the AHRQ Hospital-Public Report survey (see eAppendix 3) based on authors’ expert knowledge about online public reports and based on existing online surveys from participating public reporting websites. Participating report sponsors subsequently vetted the survey, giving feedback during a webinar for this purpose, as well as over email. We performed cognitive interviews with 11 potential respondents (including consumers, health care professionals, an employer, and an insurer) in order to improve interpretability of the survey questions and response options. We created the Physician-Public Report survey (see eAppendix 4) by making minor modifications to the Hospital survey while maintaining the essential content, and performed cognitive interviews for the new survey with two consumers and two healthcare professionals. The usability and technical functionality of both surveys were tested prior to implementation by research staff and during the cognitive interviews.
eAppendix 3. AHRQ Hospital-Public Report Survey

Survey formatting notes:

- Survey directions are in blue (i.e. anything blue is not visible in survey)
- “Page x” refers to a new survey page
- The survey is programmed to show Page 1 and Page 2 to all respondents. After that, the survey branches to separate question sets for each person-type on Page 1. Each Person-type specific question set starts with a new header and new page in the document below.
- For Patients and Friend or Family Members, not all survey pages will be shown. The survey software will show only 3 of the 5 question topics (Purpose of Visit, Topics of Interest, Using the Website, What would you like added or changed, Demographic questions), and is programmed to choose at random which of the three pages to show.

Survey invitation [pops up upon arrival at the website]

We'd like your feedback.
Your participation in this 2-minute survey will help improve this non-profit website, making it easier for everyone to find a good hospital.

The survey will appear at the end of your website visit.

Title: Purpose of your visit

Item 1
What was the primary purpose of your visit to the website today? To:
(choose only one)
Choose the best hospital for myself or compare hospitals
See how good my hospital is
Prepare for a talk with my doctor
Get information for my family or friends [redirect to Family and Friends survey items]
Learn about a particular disease
Get practical information about a hospital (phone number, location)
Find out how much I would have to pay at a hospital
Other:

Item 2
Were you able to accomplish the primary purpose of your visit?
Definitely
Mostly
Only partially
Not at all

Item 3
Did you have other reasons (in addition to the primary reason above) for your visit today? To:
(choose all that apply)
Choose the best hospital for myself or compare hospitals
See how good my hospital is
Prepare for a talk with my doctor
Get information for my family and friends
Learn about a particular disease
Get practical information about a hospital (phone number, location)
Find out how much I would have to pay at a hospital
No, I had no other reason
Other:
Title: Topics of interest to you

Item 1
What medical conditions are you looking for information about today? (choose all that apply)
Heart disease (for example, heart attacks or heart failure)
Surgery (for example, hip or knee replacement, or gallbladder surgery)
Obstetrics and gynecology (for example, having a baby)
Pediatric conditions
Cancer
Asthma
Pneumonia
None of the above
Other:

Item 2
What types of information about hospital care are you looking for today? (choose all that apply)
How often complications or errors occur
How often infections occur
How patients rate their care (for example, how many patients would recommend the hospital)
How often patients survive
How often patients get the correct care (for example, how many stroke patients get the right medicine)
None of the above
Other:

Title: Using information from the website

Item 1
How likely are you to use the website information now to choose a hospital or change hospitals?
Very likely
Likely
Unlikely [branch to page 6]
Very unlikely [branch to page 6]

Item 2
How likely are you to use the website information to have a conversation with your doctor or other health care provider?
Very likely
Likely
Unlikely
Very unlikely

If you searched using Google (or Yahoo, Bing, or other search engine) to get to the website, did you search for a:
Specific hospital (for example, “St. Francis Medical Center”)
Website comparing hospitals
Medical problem or treatment (for example, “heart failure” or “high blood sugar”)
I did not use Google or another search engine
I do not know
Other:

Page 7
75% complete

Title: What would you like added or changed?
Item 1
What additional information would make the website more useful? More information about:
(choose all that apply)
How well the hospital treats my specific medical condition
How well the hospital does my specific surgery or procedure
How much I would pay
Practical aspects of the hospital (for example, phone number, location)
Comments from people who have been patients at the hospital
Hospitals that are not currently on the website
Individual doctors within a hospital
Other:

Item 2
What would make the website easier to use for you?
(choose all that apply)
Provide a different way of searching the website
Provide a different way of sorting the results on the website
Make the information easier to understand (for example, less technical terms)
Make it easier to find the best hospital
Require fewer clicks to get information that I want
Other:

What is your age?
<18 years old
18 to 24
25 to 34
35 to 44
45 to 54
55 to 64
65 to 74
75 or older

Item 2
Are you male or female?
Male
Female

Item 3
Are you of Hispanic or Latino descent?
Yes, Hispanic or Latino
No, not Hispanic or Latino

Item 4
What is your race?
White
Black or African-American
Asian
Native Hawaiian or other Pacific Islander
American Indian or Alaska Native
Other

Item 5
What is the highest grade or level of school that you have completed?
8th grade or less
Some high school, but did not graduate
High school graduate or GED
Some college or 2-year degree
4-year college graduate
More than 4 year-college degree

Item 6
What type of health care insurance do you have?
(choose only one)
Private insurance (i.e. from your employer or purchased by you)
Medicare
Medicaid
No insurance
I don’t know
Other:
Title: Purpose of your visit

Item 1
What was the primary purpose of your visit to the website today? To:
(choose only one)
See how my hospital is performing
Compare my hospital’s performance to other hospitals’ performance
Choose a hospital to make a patient referral
Choose a hospital for myself [bounce to “HCP Patient or might be patient” items at end of survey]
Get practical information about a hospital (phone number, location)

**Completion Event**

Thank you for taking the survey!

Your participation will help us understand how to make the website better so that people can easily find information about how well hospitals take care of their patients.

The study was conducted by Dr. R. Adams Dudley's research team at the Philip R. Lee Institute for Health Policy Studies, at the University of California San Francisco.

If you have any questions about the survey, please contact us at: websitesurveyuucs@gmail.com

You may now return to [http://participatingwebsitehere.org](http://participatingwebsitehere.org) or simply close this window.
eAppendix 4. Physician-Public Report Survey

Survey formatting notes:

- Survey directions are in blue (i.e. anything blue is not visible in survey)
- “Page x” refers to a new survey page
- The survey is programmed to show Page 1 and Page 2 to all respondents. After that, the survey branches to separate question sets for each person-type on Page 1. Each person-type specific question set starts with a new header and new page in the document below.
- Randomization to decrease response burden: For Patients (including Health Care Professionals who indicate that they are “Choosing a @092393 for myself”) and Friend or Family Members, not all survey pages will be shown. The survey software will show only 3 of the 5 question topics (Purpose of Visit, Topics of Interest, using the Website, What would you like added or changed, Demographic questions), and is programmed to choose at random which of the three pages to show.
- Piping in: The answer to Item 1 on Page 2 is used throughout the rest of the survey wherever @092393 appears.

What would make the website easier for you to use?
(choose all that apply)
Provide a different way of searching the website
Provide a different way of sorting the results on the website
Make the information easier to understand (for example, fewer technical terms)
Make it easier to compare @092393s on one page (for example, show them side by side with only the information needed)
Make it easier to find a @092393 by location
Make it easier to identify a good @092393. How?

Item 3
Please list any quality measures or @092393(s) that you would like to see on the website.

[free text box]

Item 4
Please write any additional comments about how the website could be more useful or easier to use.

[free text box]

Item 5
How likely are you to visit the website again?
Very likely
 Likely
 Unlikely
Very unlikely

A few last questions about you

Item 1
Are you a:
(choose all that apply)
Physician [branch to Specialty Question]
Nurse practitioner [branch to Specialty Question]
Pharmacist
Social worker
Executive
Quality manager
Other:

Item 2
In what setting do you primarily work?
Solo or small group practice (less than 10 providers)
Larger group practice (10+ providers)
Hospital
Other:

Item 3
What is your age?
18 to 24
25 to 34
35 to 44
45 to 54
55 to 64
65 to 74
75 or older

Item 4
If you got to the website by using Google (or Yahoo, Bing, or other search engine), did you search for a:
Specific @@092563 (for example, Dr. Smith or Dr. Smith’s clinic)
Type of @@092563 (for example, pediatrician or pediatric clinics)
Website comparing @@092563s
Medical problem or treatment (for example, "high blood sugar" or "cancer surgery")
I did not use Google or another search engine
I do not know
Other:

Item 5
What is the zip code at your primary workplace?
30% complete

Purpose of your visit

Item 1
What was the primary purpose of your visit to the website today? To:
(choose only one)
Choose the best @@@092563 for myself or compare @@@092563s
See how good my @@@092563 is
Prepare for a talk with my doctor
Get information for my family or friends
Learn about a particular disease or treatment option
Get practical information about a @@@092563 (phone number, location)
Find out how much I would have to pay for care from a specific @@@092563
Other:

Item 2
Were you able to accomplish the primary purpose of your visit?
Definitely
Mostly
Only partially
Not at all

Item 3
Did you have other reasons (in addition to the primary reason above) for your visit today? To:
(choose all that apply)
Choose the best @@@092563 for myself or compare @@@092563s
See how good my @@@092563 is
Prepare for a talk with my doctor
Get information for my family or friends
Learn about a particular disease or treatment option
Get practical information about a @@@092563 (phone number, location)
Find out how much I would have to pay for care from a specific @@@092563
No, I had no other reason
Other:
Topics of interest to you

Item 1
When you are choosing a @092563, are there any particular conditions you are concerned about?
(choose all that apply)
Heart disease (for example, high blood pressure or heart failure)
Obstetrics and gynecology (for example, pregnancy)
Cancer
Pediatrics
Asthma
Pneumonia
Diabetes
Other:

Item 2
What specific types of information are you looking for today?
(choose all that apply)
How patients rate their care (for example, how many patients would recommend the @092563)
How often patients get the correct care (for example, how many people having a heart attack get the right medicine)
How often mistakes occur (for example, medication prescribing mistakes)
Other:

Item 3
What types of doctors are you interested in?
(choose all that apply)
Doctors providing routine pregnancy care
Doctors providing other routine care (for example, preventive or primary care)
Surgeons
Doctors other than surgeons providing specialty care (for example, cancer doctors or heart doctors)
Using information from the website

Item 1
How likely are you to use the website information now to choose a doctor or change doctors?
Very likely
Likely
Unlikely [branch to page 33]

Completion Event
Thank you for taking the survey!
Your participation will help us understand how to make the website better so that people can easily find information about how well doctors and medical groups take care of their patients.
The study was conducted by Dr. R. Adams Dudley's research team at the Philip R. Lee Institute for Health Policy Studies, at the University of California San Francisco.

If you have any questions about the survey, please contact us at:
websitesurveyucsf@gmail.com
You may now return to [referring website] or simply close this window.
eAppendix 5. Response Rate Description

We surveyed participating website visitors from February-August 2011. We used an “open survey” design, in which all visitors were offered the opportunity to take the survey if they viewed pages the report sponsors designated as having relevant quality content. The invitation to take the survey appeared in a pop-up window, and the visitor was directed to take the survey at the end of the session.

Response rate for the survey was based on the number of unique visitors who were invited to take the survey. Once the survey invitation had been shown once, it was not shown again on the same computer, using cookies to identify that the survey had been launched. Because web analytics do not differentiate between whether a person has been to another page on the website, there was a potentially for over-counting of unique visitors if unique visitors to all pages where the survey was launched are counted separately.

Report sponsors varied in which pages (defined as separate URLs) to launch the survey, with some choosing to launch from all pages of the website, some only launching from the home page, and some launching from several different pages. We used the following algorithm to calculate the denominator for each website, based on website pages the survey was launched from: if all pages, we used the total number of unique visitors; if only one page, we used the count of unique visitors only to that page; if multiple URLs, including the home page, we used the count of unique visitors to the home page; if multiple pages, without the home page, we used the count of unique visitors from the multiple URLs.
