Requirements regarding usability of the medication platform

User interface

- Structured information according to diagnosis, long-term and on-demand medication
- Structured information in a chronological order
- Intuitive design and navigation, tailored to users’ workflow
- Ergonomic presentation, large font size, customizable adaptation of information density

User-centered provision of information

- Lay and multilingual language
- Glossary and wiki to support comprehensibility
- Use of visual aids, clues and videos
- User guide, provision of training and links to additional support

Legend:  
**green**: requirements stated by patients with type 2 diabetes only  
**bold font**: relates to requirements reported with high frequency
