Correction of: <https://www.jmir.org/2021/2/e18750/>

(*J Med Internet Res* 2021;23(3):e28358) doi: [10.2196/28358](https://doi.org/10.2196/28358)

In “Using the Patient Portal Sexual Health Instrument in Surveys and Patient Questionnaires Among Sexual Minority Men in the United States: Cross-sectional Psychometric Validation Study” (*J Med Internet Res* 2021;23(2):e18750) four errors were noted.

In the originally published paper, the “greater than or equal to” symbol (\geq) was missing in three places in tables and in one place in the main text due to an XML conversion error. The following corrections have been made:

In Table 1, under “Age (years),” “40” has been corrected to “ ≥ 40 ”.

In Table 5, under “Age category,” “40” has been corrected to “ ≥ 40 ”.

In Table 6, under “Age category,” “40” has been corrected to “ ≥ 40 ”.

In the section “AMIS-PPSHI Scores,” the symbol was missing in the following sentence:

However, scores were marginally higher among participants with a Kessler 6-item psychological distress scale (K6) score 13.

This has been corrected to:

However, scores were marginally higher among participants with a Kessler 6-item psychological distress scale (K6) score ≥ 13 .

The correction will appear in the online version of the paper on the JMIR Publications website on March 5, 2021, together with the publication of this correction notice. Because this was made after submission to PubMed, PubMed Central, and other full-text repositories, the corrected article has also been resubmitted to those repositories.

This is a non-peer-reviewed article. Submitted 02.03.21; accepted 03.03.21; published 05.03.21.
