### Supplementary Material: List of brief video clips made available as part of the self-management support component of the EDGE-System

"The titles of the included videos were:

- 1 "How to use the Handihaler";
- 2 "How to use the Accuhaler";
- 3 "How to use the Metered Dose Inhaler";
- 4 "How to use the Turbuhaler";
- 5 "Pulmonary rehabilitation importance"<sup>a</sup>;
- 6 "Stay active";
- 7 "How to use the Aerochamber";
- 8 "Manage my mood";
- 9 "Manage my breathing";
- 10 "Manage my worry"
- 11 "How to use the Respimat"
- 12 "Relaxation technique";
- 13 "My breathing exercises"; and
- 14 "How to use the Volumatic".

<sup>a</sup>The pulmonary rehabilitation video was developed by Oxford Health NHS Foundation Trust to supplement the evidence-based course which many of the trial participants had already attended. Other videos were based on standard clinical practice with the aim of supplementing advice already received."

### Supplementary Table 1: Definition of an exacerbation

The number of recorded exacerbations defined as episodes in which antibiotics or oral steroids were prescribed or in which the patients were seen in the accident and emergency department or admitted to hospital in the presence of an acute change in respiratory symptoms (defined as the presence of at least two symptoms, one of which should be major (major symptoms: change in sputum; more breathless; chest tight. minor symptom: unwell, tired, temperature, a cold) or a report of a patient taking more salbutamol, either blue inhaler or by nebuliser, for at least 48 hours).

Major symptoms	Change in sputum; More breathless; Chest tight.
Minor symptom	Unwell, Tired, Temperature, A cold (URTI)

## Supplementary Figure

Probably density curve for clinician time spent each session reviewing data

Vertical (y) axis – probability of given session length

Horizontal (x) axis - time for each session

*Footnote.* Duration of sessions was estimated from time for which the system was active. This does not account for time spent when logged on but not using the system – so estimates are conservative. Therefore, for at least 60% of the sessions, the nurse was logged on for one hour or less.
